Below are the fields/columns available for customising the Dashboard views. The dashboard can be customised by creating a copy of one of the standard views and then editing that view.

When adding columns to a dashboard view, the 'Group' must be selected first, the browser will refresh and the available columns for that group will then be available in the next drop down.

Further detail about how to customise the dashboard views can be found by using the online "Help" facility in Facilities Manager.
